PROFESSIONAL PROFILE

I am a full-stack software engineer working on web-based software for the aviation and defence industry. I joined Comply365 as a document technician in 2023, moved across into the development team, and in around two and a half years as a developer, I have gone from a junior developer to acting as technical lead for our document editor. Most of my work is in React, TypeScript and Java. I am ambitious and I push myself to always strive for excellence when developing software. I am looking for a role where I can further my skills as a developer and continue to make a meaningful impact.

CORE SKILLS

Languages & markup	TypeScript, JavaScript, Java, SQL, XSLT / XPath / XQuery, HTML, CSS, XML
Front end	React, Tailwind CSS, Bootstrap, Bespoke UI Library
Back end & APIs	Node.js, Express.js, Spring Boot, REST API design, third-party API integration, OAuth 2.0 / OpenID Connect
Structured content/Schemas	Fonto SDK, S1000D, DITA, ATA iSpec 2200, XSD, RNG
Databases	SQL Server, MongoDB, Mongoose
Testing & tooling	Vitest, JUnit, coverage reporting, Vite, ESLint / Prettier, Git, GitHub, Bitbucket
Deployment & Operations	Jenkins, Docker, Datadog, Agile, Jira, Confluence

EXPERIENCE

Junior Software Engineer – Full-Stack & Acting Technical Lead , Comply365	April 2026 – Present
• Make the technical and design decisions when planning any tickets for the document editor in our software application • Act as technical lead for multiple developers, covering mentoring, PR approvals and our coding standards • Run knowledge transfer sessions for the wider engineering team • Set up Vitest and coverage reporting for the document editor, which had no unit tests before, and took coverage from 0% to 80% • Work across the wider core application on both frontend and backend tickets • Own triage and urgent fixes for production issues in the Fonto editor • Contribute to estimation and planning for upcoming work	
Junior Software Engineer , Comply365	January 2025 – April 2026
• Improved and maintained a document editor built on Fonto, used for aviation and defence content standards such as S1000D, DITA and ATA iSpec 2200 • Built features across the stack with TypeScript, JavaScript, React, Java, Spring Boot and HTML and CSS. • Extended the Fonto editor through its SDK with custom operations, widgets and configuration, and worked with XSD / RNG schema validation and XSLT / XPath transforms • Took part in planning and refinement of tickets across five-week sprints • Worked closely with other people in the organisation to agree features and timelines	

- Converted and maintained airline manuals to a high standard of quality and consistency
- Made changes to airline SOPs across several different ICT systems
- Worked with XML, XSLT, HTML and CSS to make changes to structured content
- Edited documents and graphics as instructed by our airline customers

EARLIER EXPERIENCE

Telephone Collections Agent, Sigma Connected

April 2022 – August 2023

- Collected payments from Octopus Energy customers, which needed strong customer service skills such as empathy, rapport building, objection handling and patience
- Used several ICT systems to log details, set up direct debits and raise issues

E-commerce Light Store (self-employed), Get Lit Light Store

April 2020 – September 2020

- Built a Shopify store that could take and process orders
- Ran Facebook and Instagram advertising campaigns to bring traffic to the site
- Managed inventory with chinese suppliers and updated product listings
- automated order fulfillment processes
- Made the marketing material, including promotional videos and images, and handled customer service

Gearbox Technician (six week university placement), McLaren Formula 1

April 2019

- Designed 3D models of tooling for stripping down and rebuilding gearboxes
- Produced disassembly and reassembly manuals for McLaren heritage gearboxes
- Logged all gearbox race components with their mileage, ensuring accurate records for maintenance and performance analysis
- Stripped and cleaned gearboxes after races and did light maintenance such as replacing oil seals, filters and heat shields

PROJECTS

Blockchain Forum

[Live](#) · [Code](#)

A forum with a Reddit style upvote system, built on the MERN stack with Tailwind. Posts are only visible once you sign in, using Google OAuth and JSON Web Tokens.

Gameify

[Live](#) · [Code](#)

A Steam style game library that pulls titles and artwork from the RAWG API. Built with React and Tailwind.

Personal Portfolio

[Live](#) · [Code](#)

My portfolio site, pulling together a range of smaller projects.

EDUCATION

Level 4 Software Developer Standard – City & Guilds

2025 – 2026

Passed with distinction

Automotive Engineering – University of Wales Trinity Saint David

2017 – 2019

Higher national certificate (HNC)

Level 3 Light Vehicle Repair – Coleg Gwent, Crosskeys

2015 – 2017

Passed with distinction

9 GCSEs grade A* to C – Brynmawr Foundation School

2010 – 2015

Including English Language (B), Maths (B) and Double Science (B)
